

F-2013-00299 – Clinics offering egg freezing to patients over 40 and these patients' success rates

03 January 2014

Summary of request

The Authority was asked for a breakdown of UK licensed clinics offering egg freezing to patients over 40 and the number and success rates of these stored eggs when used in treatments.

HFEA response

Please find the requested data in the table below. Please note that the two spreadsheets contain identical data but are presented in different formats.

Table 1 illustrates the centres in question and the numbers of cycles of egg freezing that have been performed for patients in different age bands.

Table 2 shows the success rates for the subsequent use of these stored gametes. Please note that these numbers are the aggregate for a number of years of data as to provide the numbers for individual years could make it possible to identify the patients in question. It should also be noted that all these figures relate to patients under the age of 45.

You will note that very small numbers have been replaced with a '<5' figure. This is to ensure the anonymity of those patients to whom the HFEA owe a duty of care.
