

F-2015-00307- fresh vs frozen sperm success rates

12th October 2015

Summary of request

You have requested information regarding IVF success rates comparing use of fresh sperm and frozen sperm with donor eggs where the donor was aged between 25 and 35 at the time of donation.

HFEA response

Please find the attached document for the requested information.

Please note that the HFEA can only provide data up to 30/06/2013 as this is the latest date for which we have verified treatment and outcome information. Also the HFEA does not provide rates where there are less than 50 cycles as it would not be statistically valid; additionally, the small number of Frozen cycles means that the rates given should be interpreted with caution as small inherent variation can have a significant effect on the percentages.
